Bay Area Chess Application Maintenance Documentation

Team: Carlos Reyes, Oren Bukspan, Tze Kang Ng, Daniel Zhang

Client: Judit Sztaray

Last Updated: 12/11/14

The application pulls directly from the database, so any changes in the website will be reflected in the mobile application.

Getting the code

To get the application code on your machine, you first need a version of XCode with Swift support (6.0 or greater). Then, in terminal:

1. Navigate to the directory you want to pull the code in to
2. Type: git clone <https://github.com/duke-compsci408-fall2014/Pawns.git>
3. You should now have a folder named "Pawns" within the current directory

Simulating the application

If you want to test the application out on your computer, in XCode, press the Play (▶) button to build the application and run the simulator.
